

Comunidades energéticas, ¿qué son?

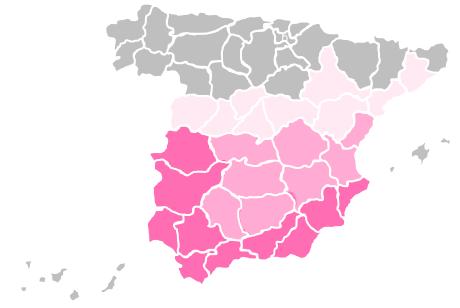

Comunidades energéticas, ¿cómo funcionan?

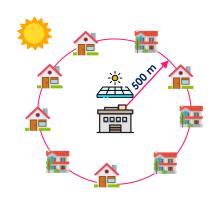

Un ejemplo práctico

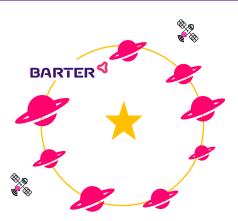

Barter is a new electric utility with a unique business model:

- Barter invests in solar installations on rooftops (STARS)
- Barter offers cost-effective electricity to nearby customers (PLANETS)

by building Barter RINGS, the solar energy communities of the future!

| RING'S COMPONENT | ICON | DESCRIPTION |
|------------------|------|--|
| STAR | * | Rooftop where the solar PV installation is installed |
| PLANETS | | Barter Clients (Residentials, small shops & offices) |
| SATELLITE | | Future Barter electricity related services: batteries, charge stations, etc. |

Led by a team that has successfully scaled billion dollar businesses in renewable energy and retail electricity

Isabel Reija, CEO

Founder and ex-CEO of Fenie Energía, the fastest growing Spanish independent utility company, which she built from scratch in 2010 and which reached 400k clients and €800M of revenues in 2018.

endesa

Martin Varsavsky, Chairman

A serial entrepreneur who has successfully founded 7 companies, including Jazztel and Eolia Renewables, which was sold for €1.4B.

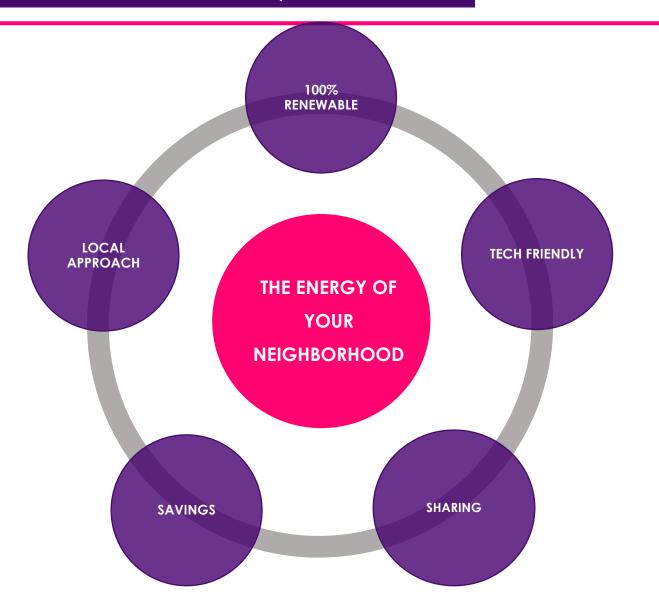

Miguel Salís, Vice Chairman

Co-founded Eolia Renewables, where he acted as CEO. Miguel also founded and promoted different photovoltaic and wind generation projects in Spain. Prior to that he was Jazztel's CFO since its inception

Barter Value Proposition

Why is Barter different?

- ✓ It is not self-consumption; it is shared solar energy
- ✓ You don't need to invest or finance it.
- ✓ You contribute to reduce your carbon footprint
- ✓ You pay less from day one
- You are part of an energy community
- Shared energy is only the beginning...

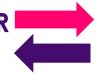

A DEVELOPED BARTER RING NETWORK

A DEVELOPED CLIENT & ENERGY PORTFOLIO

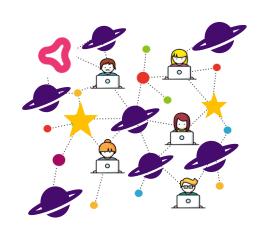

TO OFFER NEW ELECTRICITY RELATED SERVICES

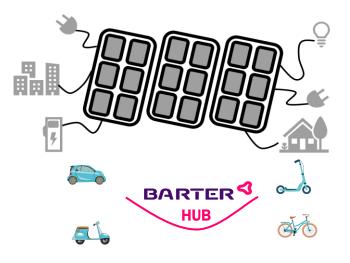

solar communities

Barter's goal is to become the utility of the future by integrating electricity generation and supply and building energy communities that initially get cheap solar electricity and will integrate additional electrical services in the future they become economically viable

Barter's value proposition is very attractive for the STAR BARTER

TANGIBLES

- No CAPEX commitment on the client's end
- Taking advantage of underused roof space
- With a recurring income, savings on the electricity bill from common areas, and financing of your self-consumption (if you wish to own some panels)
- 5-year savings in land property tax (IBI): up to 50%

INTANGIBLES

Sustainable buildings (LEED, BREEAM, net zero carbon, etc.) 📢

Savings on energy bill for tenants and neighbours

Revaluation of the building and the area

| | Strategies | Type of building | Distribution channel |
|---|-----------------------------|---|--|
| | Existing Residential Blocks | Existing apartment building | "Colegios de Administradores de fincas locales" Neighbourhood councils |
| * | New Residential Blocks | New apartment development | Real estate developersReal estate promoters. |
| | Public Buildings | Schools, sport centers | Energy AgenciesLocal councils and local agencies |
| | Business/Industrial park | Industrial ships, offices | Warehouses and office owners |
| | Suburban residential | Detached house | "Colegios de Administradores de fincas locales" Neighbourhood councils |
| 4 | Private Services buildings | Private schools, residences, supermarkets, hotels | Private services building owners Energy efficiend private ships |
| | | | |

Barter's disruptive proposition for the PLANETS 🥕

Benefits

1. Reduce their carbon footprint

• Supplying 100% of the Planets' electricity needs from renewable energy sources

2. Pay less for their electricity

 Barter offers a discounted "solar price" on the electricity supplied by the PV plant

3. Participate in the solar community

- Barter promotes an environmentally conscious community thanks to the consumption of locally produce solar energy
- Additionally, Barter offers electrical related services (EV sharing, charging points, etc.)

4. Without the need to invest

| Strategies | PLANETS under the STAR? | Additional planets |
|-----------------------------|-------------------------|---|
| Existing Residential Blocks | YES | Apartment block neighbour and community common services |
| New Residential Blocks | YES | Future neighbour and community common services |
| Business/Industrial park | YES | Office STAR's tenants, warehouses and nearby residentials |
| Suburban residential | NO | Neighbouring houses |
| Private Services buildings | NO | Small commercial shops, offices and nearby residentials |
| Public Buildings | NO | Small commercial shops, offices and nearby residentials |

BARTER RING IN ORBIT

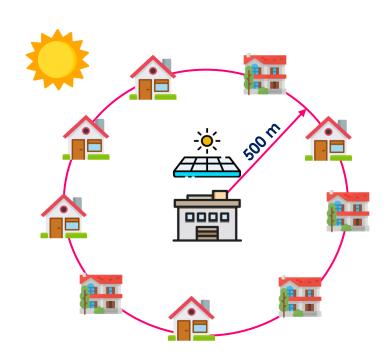

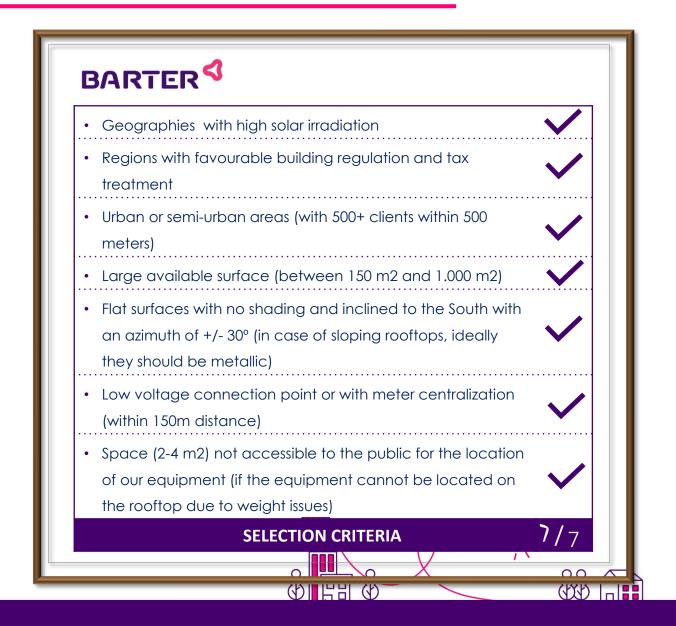

Barter's deployment criteria

customer base would allow Barter to offer new

electricity related services

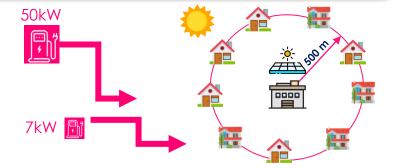

To take advantage of Barter's network and acquired customer base, Barter could offer new electricity related services as technology mature and become cost effective

EV SHARING SERVICES

As an add value for its clients, Barter could start offering EV sharing services (i.e. minutes packs and personal mobility insurance)

CHARGE INFRASTRUCTURE

4k €/charge station 1k €/installation Barter ring clients

7.4 kW

50.000 €/charge station 10k-20k €/installation Price to sell: 0.3-0.5 €/kWh

50 kW

ENERGY STORAGE

- Hub batteries
- Home batteries
- EV batteries

Opportunity to optimize the cost of energy through the use of battery storage

Barter upsides in the future

- A PLACE TO CHARGE
- A PLACE TO SHARE
